

## A NEW ERA IN ALL-HAZARDS COMMUNICATIONS HAS BEGUN...

CentraAlert® EOS™, the world's first plug and play emergency operating system, brings you affordability, scalability, and true interoperability like never before. Whether you need to activate a single device, or alert an entire community, CENTRALERT® EOS™ makes it easy.

With our patent-pending modular design, you can select the system that's right for you. Start small and add modules as budget allows. Or, integrate your entire alert and notification process at once. Either way, you're in control!

And with our universal interface, operations are simplified via the standardized activation screens. This assures that your communications reach the right people at the right place at the right time. With CENTRALERT® EOS™, a new era has begun.

With CENTRALERT®... You're In Control!™

## COMMUNITY CALL-OUT™ MODULE

The Community Call-Out™ module gives you the ability to alert and notify your community or emergency personnel through telephones, cell phones, faxes and pagers. Our on-site and off-site solutions provide the best of both worlds. For example, routine, low volume call-outs could be handled on-site with just a few local phone lines, while high volume community wide call-outs could be routed off-site through our nationwide CENTRALERT® call centers. This maximizes call volume while minimizing per call costs.

With CENTRALERT®... You're In Control!™

### FEATURES:

- Integrated Street-Level Mapping
- Quick Select™ – Graphical Selection, Storage, and Activation of Call-Out Areas
- Control Map Layers and Attributes
- Import and Manage Existing Databases
