A NEW ERA IN ALL-HAZARDS COMMUNICATIONS HAS BEGUN...

CentrAlert® EOS™, the world's first plug and play emergency operating system, brings you affordability, scalability, and true interoperability like never before. Whether you need to activate a single device, or alert an entire community, CENTRALERT® EOS™ makes it easy.

With our patent-pending modular design, you can select the system that's right for you. Start small and add modules as budget allows. Or, integrate your entire alert and notification process at once. Either way, you're in control!

And with our universal interface, operations are simplified via the standardized activation screens. This assures that your communications reach the right people at the right place at the right time. With CENTRALERT® EOS™, a new era has begun.

GUARDIAN™ USER INTERFACE

Guardian™ User Interface is your portal to CENTRALERT® EOS™.

The easy to use "recipe" creator coordinates all of your protective actions, grouping them according to your emergency action plans.

Select your affected area using our mapping tools and device lists. Icons show the different devices as they are added to the interface.

Guardian™ allows you the freedom to pre-stage your recipes prior to activation or dynamically build them on the fly.

During activation Guardian™ provides real time updates via status bars, icon symbols, and alert messages.

With CENTRALERT®... You're In Control!™

FEATURES:

- Windows® Based User Interface
